Re: End-Of-Sale of Target-Ready MicroMarker Contrast Agent

Dear Valued Customer,

FUJIFILM VisualSonics, Inc. (VSI) would like to thank you for being a longstanding customer. We are committed to providing the highest quality products and services to our customers, ultimately to empower ground-breaking research in the advancement of human health.

As of December 31, 2023, VSI will cease offering Target-Ready MicroMarker Contrast Agent for sale. This change does not affect Untargeted MicroMarker Contrast Agent, which will continue to be available for purchase. Additionally, no changes will be made to our existing contrast acquisition or analysis software, so researchers working with targeted bubbles will be able to continue their studies. Scientific Applications support regarding the use of any type of microbubbles with all currently supported Vevo Imaging System platforms will continue to be available indefinitely.

Should you require further information on ultrasound contrast agents, or on the capabilities of the Vevo Imaging Systems to acquire contrast-enhanced ultrasound data, please contact us through our website, www.visualsonics.com/support. Links to support request forms for our Technical, Scientific Applications, and Sales teams are available there.

As always, we appreciate your business and look forward to providing you with the best tools to assist you in attaining your research goals.

Regards,

Greg Nesbitt

Vice President, Global High Frequency
