Re: End-Of-Sale of Vevo Strain (legacy)

Dear Valued Customer,

FUJIFILM VisualSonics, Inc. (VSI) would like to thank you for being a longstanding customer. We are committed to providing the highest quality products and services to our customers, ultimately to empower ground-breaking research into the advancement of human health.

As of June 01, 2024, VSI will cease offering the original version of our Vevo Strain analysis software for sale (herein referred to as "legacy Vevo Strain"). Scientific Applications and Technical support for the use of legacy Vevo Strain in your research will continue until June 01, 2025.

Moving forward, the recently launched Vevo Strain 2.0 includes a wide range of new features and functions that take cardiac strain analysis far beyond what was possible in legacy Vevo Strain. Examples include improved tracking (as compared to legacy Vevo Strain), a "quiver" tool to help visualize endocardial borders, measure of myocardial rotation, bulls-eye maps, right ventricular and atrial strain modules, and more. Additionally, there is an option to activate (at a cost) tools for the analysis of Inward Displacement and Hemodynamic Forces. Please contact your local VSI sales representative, or VSI directly, for further details.

As always, we appreciate your business and look forward to providing you with the best tools to assist you in attaining your research goals.

Regards,

Greg Nesbitt  
Vice President, Global High Frequency
